

Senior Frontend Developer

Assignment

Get to know us

Since August 2009, our software has helped more than 22,000 passionate businesses owners set up and run their own online stores. Within six months of launching, BigCommerce was the fastest growing e-commerce platform in the world – and we're well on our way to becoming the marker leader. What Salesforce did to CRM, and Facebook did to Social networking, we're doing to e-commerce.

Why are we growing so quickly? Because we have great software and amazing people!

Our company is full of self-motivated, creative, "A players" who are passionate about what they do. They love coming to work every day and they love helping our clients succeed with their grandiose visions of e-commerce glory. We're really just a bunch of geeks who love software.

Why You'll Love Working Here

- Our software changes people's lives
- Awesome culture, events and outings
- You'll work with other smart people
- Your opinion will be heard and valued
- Friday afternoon poker tournaments
- XBoxes and heaps of free food & drink
- A team that cares about each other
- A unified, passionate leadership team
- You'll build life-long friendships
- We're really just a bunch of g33ks

Submission

Please submit your portfolio and completed assignment by email to chris.iona@bigcommerce.com

Portfolio

Please prepare a sample of your portfolio that:

- Demonstrates a product or project that you're proud of
 - Something that showcases your skills across UX, design, HTML, CSS and JavaScript
 - Reasoning of choice of JS/CSS frameworks
 - Full source available for our review (if possible)
-

Assignment

Your challenge is to replicate the attached screenshots of the homepage of a mocked store front template. You are free to build the interface as you deem appropriate (front end frameworks; JS libs; web standards; OOCSS).

Think of this page as part of a much larger site (i.e. don't treat this as just the one page), and think about how components (for example, the sidebar widget) can be easily re-used in other parts of the page and site. We are expecting that your code will be 'production like', so take care.

Browser support: IE7+, latest Firefox, Chrome and Safari
